## Preamble, Acknowledgements and Credits

The Ministry of Education is pleased to present the fifth edition of India Rankings for the year 2020 based on the National Institutional Ranking Framework (NIRF). The fifth edition of India Rankings builds upon previous four annual exercises undertaken between 2016 and 2019 with consolidation and improvements.

The First and Second Meetings of the Implementation Core Committee (ICC) for India Rankings 2020, constituted by the Ministry of Education (see Appendix I), was convened under the Chairmanship of Secretary (HE) on 5<sup>th</sup> and 23<sup>rd</sup> Sept. 2019 respectively at MHRD. During the Meeting, it was resolved to invite applications for participation for ranking institutions under two additional subject domains, namely, Agriculture and Dental from 2020 onwards. However, while ranking of institutions under subject domain “Dental” was undertaken this year considering the request received from the Dental Association of India, ranking of institutions under “Agriculture” subject domain was not undertaken as desired by the Indian Council of Agricultural Research (ICAR). Moreover, based on feedback received from individuals and institutions, NAAC-accreditation score was considered as an extended parameter under “Perception” for ranking under “University” with appropriate weightage.

The ranking exercise for the year 2020 continues with the practice of providing a common “Overall” rank in addition to a separate rank for Universities and degree Colleges, and discipline-specific ranks in Engineering, Management, Pharmacy, Law, Medical and Architecture.

India Rankings continues to be a colossal and a challenging exercise that requires experts with in-depth knowledge of higher education system in India, tenets of data science and data crunching. The Ministry is happy to put on record its appreciation for the National Board of Accreditation (NBA) for its continued zeal and for taking leadership position in executing the task, under the guidance of the Implementation Core Committee. The NIRF Team at NBA together with the team of its partner institute, i.e. INFLIBNET Centre at Gandhinagar have played a pivotal role in the execution of this task.

## Preface

### India Rankings 2020: Towards Consolidation and Maturity

The Ministry of Education (MoE) is pleased to announce India Rankings 2020. We are indeed grateful to Shri Ramesh Pokhriyal, Honourable Minister for Human Resource Development for e-release of the India Rankings 2020 on 11<sup>th</sup> June 2020 which was telecasted live on the Twitter handle of Shri Ramesh Pokhriyal, Honourable Minister of Human Resource Development (<https://twitter.com/DrRPNishank>).

This is the fifth consecutive edition of India Rankings of institutions of higher education in India in various categories and subject domains. The National Institutional Ranking Framework (NIRF), launched on 29<sup>th</sup> September 2015 by the MHRD, is being used for this edition as well as for the previous four editions of India Rankings released every year since 2016. Unlike other rankings in the popular media, India Rankings deploys objective criteria and metrics with factual data gathered from applicant institutions themselves as well as from third party sources. Several improvements in data collection formats, metrics and comparison methodology were adopted and put in practice for India Rankings over past five years.

India Rankings 2020 continued with the consolidation process and is moving towards maturity as we built upon the NIRF parameters defined in 2015 through experience gained over the years and feedback from the stakeholders. In the process, effective and efficient benchmarks have successfully been established to assess performance of the Indian academic institutions in the higher education space. Changes in metrics, parameters and normalization algorithms were introduced over the years, although the basic framework was kept intact. As a result, the ranking of institutions has largely remained consistent, especially amongst first 25 top ranked institutions, over the years, although individual ranks might have changed by a few slots in some cases due to performance variations across institutions on some parameters. India Rankings is successful in identifying top institutions of higher education in "Overall", "Universities" and "College" categories as well as in domain-specific rankings in Engineering, Management, Pharmacy, Law, Medical, Architecture and Dental.

The practice of pre-registration of institutions that had participated in India Rankings in previous year, was continued this year also. Moreover, new institutions were invited to participate in the ranking exercise through an open advertisement. A total number of 3771 unique institutions responded and offered themselves for ranking under "Overall", category-specific or domain-specific rankings. In all, 5805 applications for ranking were made by these 3771 unique applicant institutions under various categories and / or subject domains.

The India Rankings has successfully instilled the culture of collection, compilation and curation of data required for ranking of institutions. Applicant institutions are now carefully maintaining data pertaining to their faculty, students, placement, infrastructure, expenditure on library, laboratories, equipment, operations, etc. This culture is important for institutions themselves since analysis of this data provides the big picture of trends and patterns that can be used for evaluating and streamlining processes, creating efficiencies, and improving overall student experience. While at institutional level, the data and its analytics can help in assessing institutions themselves against internal benchmarks, at the national level, the data can serve as a base for analysis of the status of higher education institutions in the country.

It is important that the credibility that the India Rankings have earned is maintained with careful attention to details. As a matter of practice, 100 institutions are ranked in Overall, University and College categories whereas ranking is kept restricted between 20 and 75 institutions in all other domain-specific rankings, i.e. Architecture, Pharmacy, Management, Law, Medical and Dental. However, number of Engineering institutions that are being ranked has been increased from 100 to 200 from 2019 onwards. It may further be noted that all data for ranked institutions is meticulously verified, inconsistencies, contradictions and outliers are screened and identified, which requires a lot of diligence, patience and tactful handling of institutions who might feel offended with direct and blunt questions on validity of data submitted by them. It requires a lot of patience in educating individual institutions on the quality requirements on the data submitted by them. NIRF Team has made extensive use of triangulation methods for detecting aberrations, contradictions and inconsistencies and effecting corrections in consultation with the concerned institutions. Persistent emphasis on accuracy of data on part of NIRF has yielded positive results with change in tendency of institutions to present inflated numbers. With continuing improvement in reliability of data from institutions, it would be possible for NIRF team to concentrate on refining existing ranking parameters and metrics and pursuit for additional parameters that can be deployed for ranking of institutions. Moreover, it would also be possible to bring-in larger number of institutions into the ambit of rankings with an ultimate goal of ranking every deserving institution.

Besides, sourcing data on various parameters from applicant institutions, third party sources of data have also been used, wherever possible. Scopus (Elsevier Science) and Web of Science (Clarivate Analytics) were used for retrieving data on publications, citations and highly-cited papers. Derwent Innovation was used for retrieving data on patents. Data retrieved from these sources was shared with the institutions for transparency with a provision to give their inputs in case they are not agreeable to the data retrieved from third party sources.

The ranking framework evaluates institutions on five broad generic groups of parameters, i.e. *Teaching, Learning and Resources (TLR)*, *Research and Professional Practice (RP)*, *Graduation Outcomes (GO)*, *Outreach and Inclusivity (OI)* and *Perception (PR)*. Ranks are assigned based on total sum of marks assigned for each of these five broad groups of parameters. Performance of ranked institutions can be seen on any of the five broad groups of parameters. A 5-dimensional view of institutions across the 5 broad generic groups of parameters provides relative strengths of the institution. Moreover, positive and strong correlation is observed between rank of institutions based on all five broad generic groups of parameters and its rank on the basis of "*Research and Professional Practice (RP)*". Moreover, the top 8 to 10 ranked institutions in Engineering, Overall, Management and Pharmacy retained their ranks between 1 and 10 in India Rankings 2017 - 2020 not necessarily in the same order.

It can also be observed that public-funded institutions including CFTI's and a few centrally funded universities hog the most of the top-ranks in almost all categories of rankings. Moreover, a significant number of state and privately funded universities and institutions appear in top 100 ranks in various categories of ranking.

SS	Student Strength
SSCI	Social Sciences Citation Index
TLR	Teaching, Learning & Resources
UE	Metric for University Examinations
UGC	University Grants Commission
WD	Women Diversity: % of Women

## **1. Background**

The process of framing National Institutional Ranking Framework (NIRF) began on October 9, 2014 with constitution of a 16-member Core Committee under the chairmanship of Secretary (HE), Ministry of Education (MoE). The terms of reference of the Committee were to suggest a reliable, transparent and authentic National Framework for performance measurement and ranking of institutions of higher education and to recommend institutional mechanisms, processes and timelines for implementation of the National Institutional Ranking Framework. The framework was given a final shape subsequent to intense discussions and deliberations during a series of meetings of the Committee and exchanges with peers and stakeholders mainly through online discussions.

The NIRF envisaged separate rankings for different categories and subject domains. As such, category-specific and domain-specific frameworks were drafted for every category and subject domain based on the broad recommendations of the National Institutional Ranking Framework. Frameworks for Universities, Colleges, Engineering, Pharmacy and Architecture were released in 2015. Frameworks for new domains and categories were drafted at the time of their induction for ranking. The Ministry also appointed an *Implementation Core Committee (ICC)* to oversee implementation of rankings under overall National Institutional Ranking Framework (NIRF).

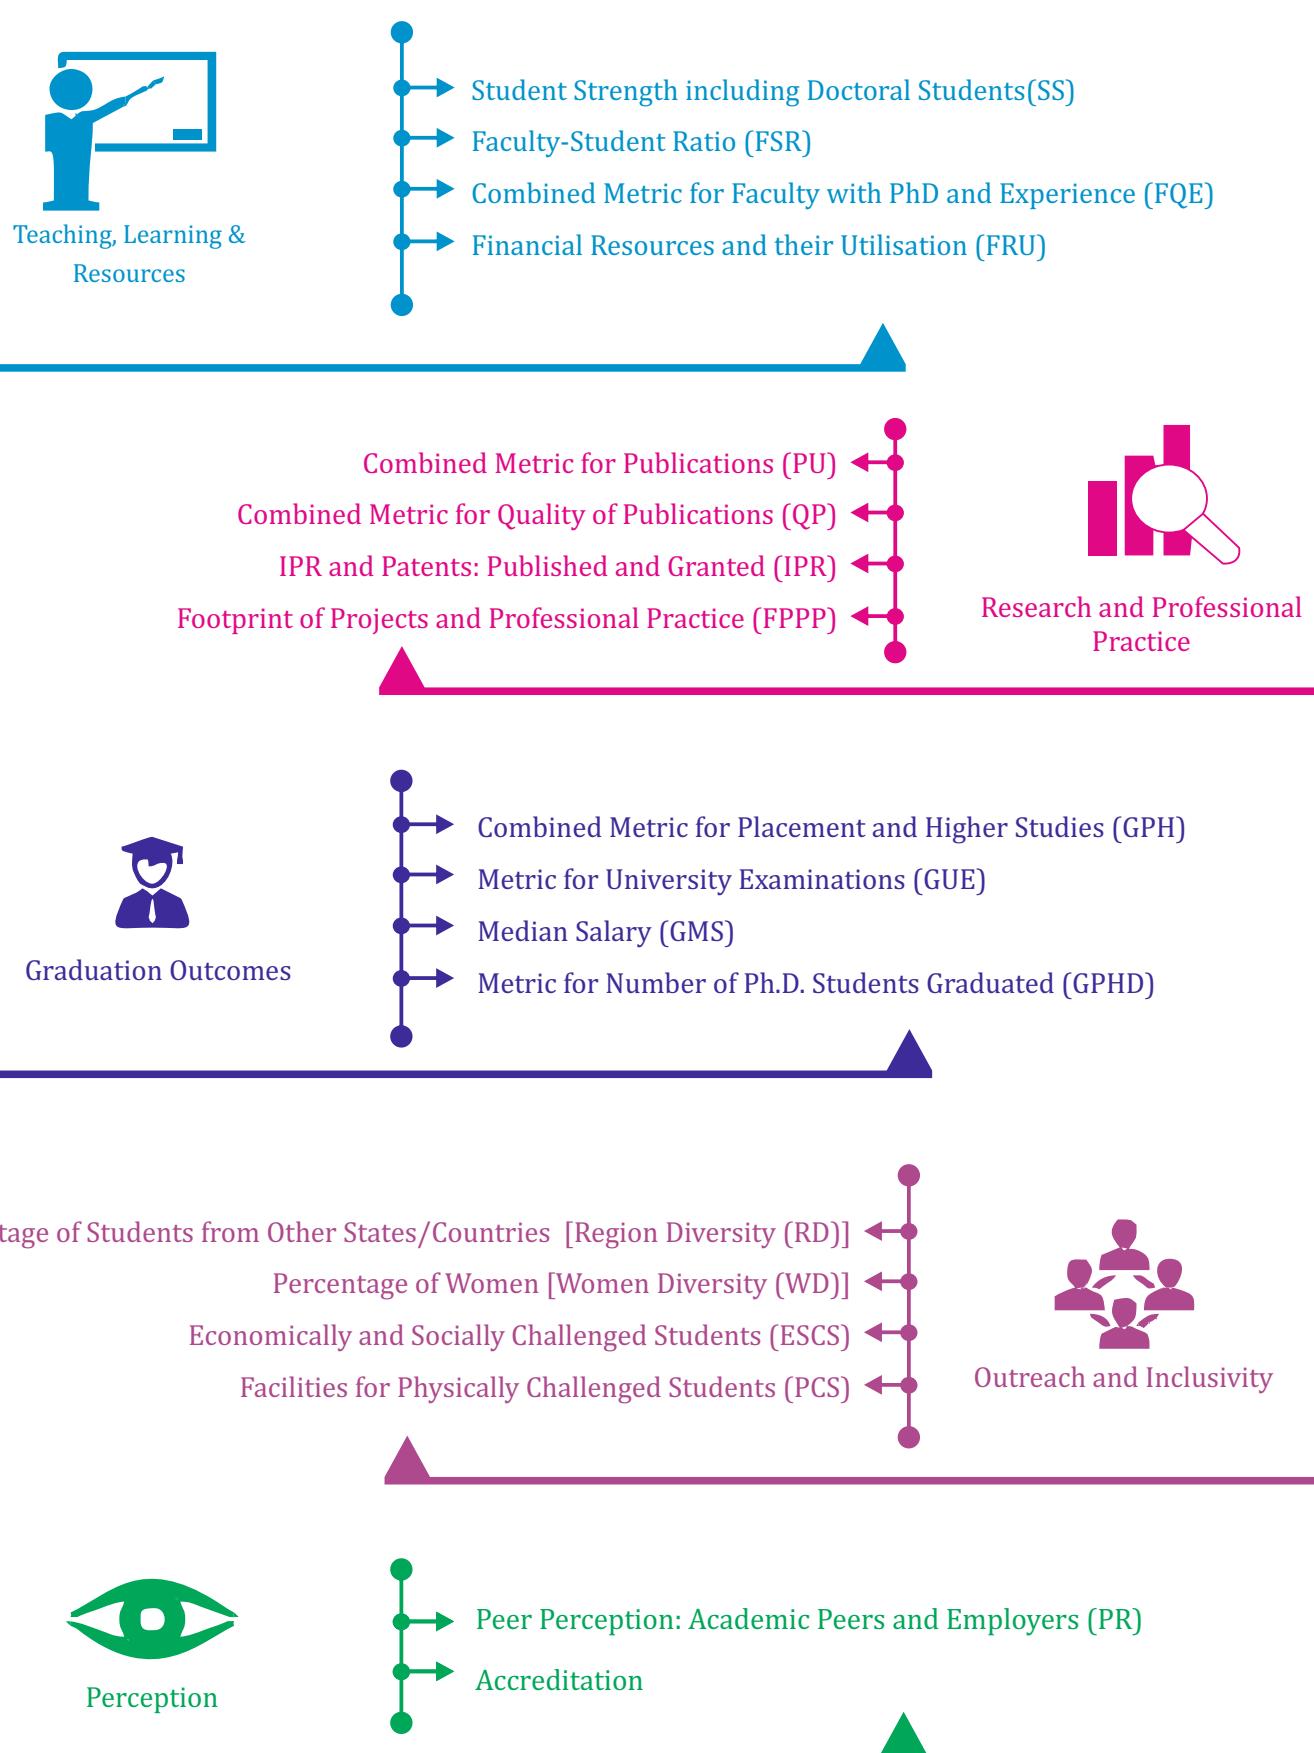

A common Overall ranking was introduced for institutions that have a minimum of 1,000 students from the year 2017 onwards in addition to the category-specific and domain-specific rankings so as to provide a common view of comparable institutions across categories and disciplines. This practice is being continued for past four years including the current year. In the year 2016, rankings were announced for Universities and for the disciplines of Engineering, Management and Pharmacy. In 2017, in addition to these four rankings, the Overall ranking, and ranking of General Degree Colleges were introduced for the first time. In the year 2018 and 2019, while continuing with above mentioned six rankings, three domain-specific rankings in the fields of Law, Medicine and Architecture were introduced. In the year 2018-19, ranking were carried out for three Category-specific Rankings (Overall, Universities and Colleges) and six Domain-Specific Rankings. In 2020, the NIRF continued with all the nine rankings, *in addition one more domain-specific ranking was also carried out for Dental institutions*. Agricultural institutions were not ranked this year as desired by Indian Council of Agricultural Research (ICAR) as they have initiated their own ranking for agriculture institutions.

The final ranking framework has identified between 16-18 parameters organised in five major groups. Several of these parameters are common to those employed globally and serve as pointers to ambience for teaching, learning and research. However, there are a few India-centric parameters, reflecting aspirations of the rising numbers of our young people enrolled in higher education institutions. Country-specific parameters relevant to the Indian situation include regional diversity, outreach, gender equity and inclusion of disadvantaged sections of the society.

The spirit of the Ranking Framework and Parameters originally identified by the Core Committee and used for India Rankings for past four years is being retained for the year 2020. A few changes have been made based on the experience gained in the process of ranking of institutions in previous four years and further tweaking of a few parameters and metrics based on the feedback sought from heads of the institutions (see point 4 below).

## **2. NIRF Parameters for Ranking of Institutions of Higher Education**

The NIRF provides for ranking of institutions in five broad generic groups of parameters, namely: i) *Teaching, Learning and Resources*; ii) *Research and Professional Practice*; iii) *Graduation Outcomes*; iv) *Outreach and Inclusivity*; and v) *Perception*. Fig. 1 provides an outline of the various sub-parameters for each of the five generic groups. Some of the sub-parameter (such as public perception, earnings from patents, etc.) have been dropped due to serious questions of reliability or consistency of data provided by the participating institutions..

**Fig. 1: NIRF Parameters for Ranking of Institutions**

By and large, India Rankings continues to give a lot of emphasis to collection, verification and use of reliable data, unlike global rankings that gives dis-proportionate weightage to perception, NIRF relies on ranking based on data which is more objective, especially in a large higher education system like India, where perception data alone can be quite misleading. Although, the task of collection, verification and authentication of data from a large number of institutions, is challenging.

### **3. Metrics to Compute Ranking Scores**

The framework for ranking of institutions is available on the NIRF Web site (<https://www.nirfindia.org/>) in the Ranking Documents for various categories and domains. These documents identify the relevant data required to suitably measure the performance score under each sub-parameter mentioned above and enunciate a suitable metric that is used to compute a score for the sub-parameter. The sub-parameter scores are then added to obtain scores for each individual parameter. The overall score is computed based on the weights allotted to each of the five broad group of parameters.

### **4. Major Changes Introduced in India Rankings 2020**

Based on our experience of ranking institutions in previous four years and feedback received from stakeholders, the following two additional parameters were introduced for India Rankings 2020 with appropriate weightage:

- i) NAAC-accreditation score as an extended parameter under "Perception" for University Category only; and
- ii) In Management domain, MDP were also considered along with EDP in Footprints of Projects and Professional Practice parameter.

Besides, parameters and methodology for ranking institutions under subject domain "Dental" was developed afresh under the overall National Institutional Ranking Framework (NIRF).

### **5. Participation: Pre-registration and New Registration**

In order to encourage larger participation in India Rankings, all institutions that had applied in the previous year, were pre-registered for India Rankings 2020 and were invited to participate in the ranking exercise. In addition, other institutions desirous of participating in the India Rankings 2020 were invited to register on the NIRF Web portal through a public advertisement. All institutions were requested to submit their applications online for Overall ranking as well as for ranking in one or more disciplines along with relevant data in a prescribed format by 14th Dec. 2019. Table 1 provides number of institutions that were pre-registered as well as those who registered themselves voluntarily. Table 2 and 3 provides number of participating institutions in different categories and domains and their geographical distribution respectively.

Description	Registered	Submitted
Pre-registration	3133	2913
Registration	1268	858
Total	4401	3771

**Table 1: Participation Numbers for Pre-registration and New Registration**

Category / Discipline	Total Number of Institutions	CFTIs and CFUs
Overall	1667	90
Engineering	1071	58
Management	630	34
Pharmacy	334	6
Architecture	66	14
College	1659	0
Medical	118	2
Law	97	7
Agriculture	48	1
Dental	115	2
Total	5805	214

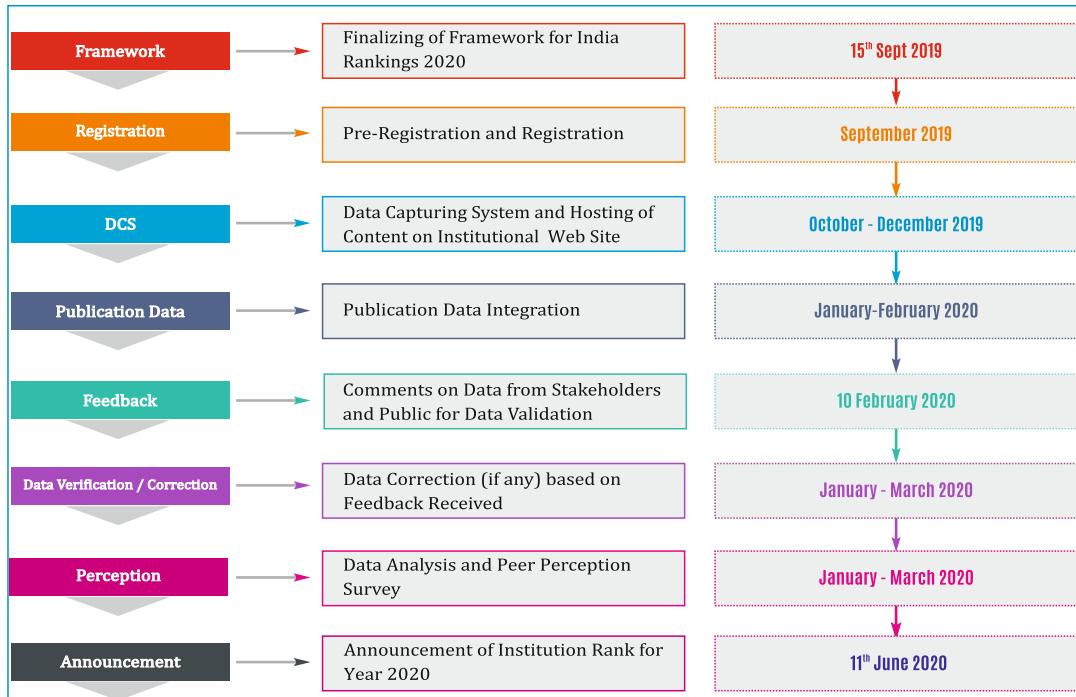

**Table 2: Participation Numbers for Overall, Category and Domain-specific Ranking**

Discipline / Region	Overall	Engg.	Mgmt.	Pharma.	Arch.	College	Med.	Law	Agri.	Dental	Total
North	209	142	137	53	18	138	27	34	9	29	796
South	784	554	271	126	25	784	62	21	18	59	2706

Total	1667	1071	630	334	66	1659	118	97	48	115	5805

**Table 3: Region-wise Participation of Institutions in India Rankings 2020**

## 6. Methodology

### 6.1 India Rankings 2020: Activity Calendar

**Fig. 2. India Rankings 2020: Activity Calendar**

## **6.2. Source of Data: Institutions and Third Party Sources**

In the absence of a reliable and comprehensive database that could supply all relevant data required for computing the scores for ranking, registered institutions were invited to submit the required data through an Online Data Capturing System (DCS). Publications, citations and HCP pertaining to research output of applicant institutions were retrieved from Scopus (Elsevier Science) and Web of Science (Clarivate Analytics). Data on patent published and granted was taken from Derwent Innovation. Moreover, number of papers that appeared in the top 25 percentile of cited papers in the world for a given discipline was taken as sub-parameter for evaluating research performance of institutions.

## **6.3. Data Collection and Data Capturing**

Data Capturing System (DCS), Feedback System and the Perception Capturing System were developed for online capturing of data from applicant institutions, feedback from public and institutional perception (from Peers and Employers). As mentioned earlier, the data on publications, citations and highly cited papers were retrieved directly from third-party sources. A brief description on data collection and data capturing is given below.

### **6.3.1. Online Data Capturing System (DCS)**

Data capturing system sought the detailed data in a format that facilitated computing the ranking metrics for each parameter as well as for checking consistency of data. Detailed notes were provided to explain every data element to help institutions to comprehend each data element and provide correct data. Attempts were made to keep the data entry to a minimum. Data of the previous two years in respect of the faculty, was pre-populated in the DCS, with provision for changes with suitable remarks/reasons for the changes.

Help desks were deployed to resolve general and technical issues faced by the applicant institutions during the entire execution process of India Rankings 2020.

### **6.3.2. Publications, Citations and Highly Cited Papers (HCP): Web of Science (WoS) and Scopus**

Two sets of citation databases were used as sources for retrieving data on the number of publications, citations and highly cited papers for the registered institutions. These citation databases comprise of: i) Science Citation Index Expanded (SCI-Expanded), Social Sciences Citation Index (SSCI), Arts & Humanities Citation Index (A&HCI), Conference Proceedings Citation Index - Science (CPCI-S), Conference Proceedings Citation Index - Social Sciences & Humanities (CPCI-SSH), Book Citation Index- Science (BKCI-S), Book Citation Index- Social Sciences & Humanities (BKCI-SSH), Emerging Sources Citation Index (ESCI) and Current Chemical Reactions (CCR-EXPANDED) hosted on the Web of Science platform; and ii) Scopus. These sources of publications and citations cover all disciplines comprehensively.

These databases were searched to determine the quantitative productivity of all eligible applicant institutions that registered themselves for ranking. The search included number of research articles published and citations received by them in a span of three calendar years, i.e. 2016, 2017 and 2018. A common time window was used to obtain this data covering a short span of two weeks in the month of February 2020 to ensure fairness.

#### **6.3.2.1 Search Strategy for Retrieving Research Publications, Citations and Highly Cited Papers from WoS and Scopus**

All permutations, combinations and changes in the names of institutions were used while searching for articles published by faculty and researchers in the databases mentioned above. Since searches were conducted using names of institutions, articles that did not have institutional affiliations of their faculty and researchers were not retrieved.

Several universities host other research institutions within their physical premises. Care was taken to ensure that credit for publications and citations are given to the concerned institutions. Manual checking of retrieved data was done in cases, i) where two institutions with same (or similar) names, ii) institutes that share the same physical premise; and iii) multiple institutes having the same name in the same city, for example Government Colleges, DAV Colleges, etc.

Some private universities have several constituent colleges and institutions (either in the same city or in different cities) that are their integral part. Information was sought from the applicant institution and universities about such constituent entities. Publications and citations received by such constituent entities were credited to the applicant institution after due verification.

Many variations in the names of universities and institutions, their physical locations and their spellings were discovered during the searches in the databases. The NIRF has taken every care to be accurate on this count. Moreover, the data on highly-cited papers were retrieved from Web of Science and data on Field-weighted Citation was obtained from Scopus (Elsevier Science). Data on patents granted and published for each institution in the last three years was retrieved from Derwent Innovation.

#### 6.3.2.2 Restricting Retrieval of Articles to a Given Discipline

Searches for publications and citations were done in the two databases, namely Web of Science (Clarivate Analytics) and Scopus (Elsevier), for applicant institutions without any subject-wise and discipline-wise restrictions for the Overall ranking of institutions. However, subject/discipline-specific searches were made for all other discipline-wise rankings in the interest of uniformity and fairness. Care was taken to design the restriction so as to get the widest possible coverage of sub-disciplines within each broad discipline.

#### 6.3.2.3 Online Perception Capturing System

An online platform was developed to capture the perception inputs from peers and employers. A large number of peers (subject experts) were invited to submit their perception feedback on applicant institutions in a prescribed format.

### 6.4 Online Feedback System

Stakeholders (that included public or other individuals or entities having an interest in one or more institutions) were invited to give their feedback through “Online Feedback System” from 10th to 20th February 2020 on the data submitted by the institutions, through a public advertisement in the newspapers and other media. The comments / feedback so received were auto-transmitted through an email without disclosing the identity of the stakeholder to the concerned institution(s) for taking necessary action at their end.

### 6.5 Data Verification

#### 6.5.1. Scouting for Outliers: Committees of Domain Experts

Committees consisting of academic experts examined the data submitted by institutions under each of the five broad generic groups of parameters, for every category / discipline. These Committees examined the data on various parameters minutely and identified outliers and anomalies for further scrutiny. Institutions whose data seemed exaggerated or had anomalies were contacted telephonically and via e-mail to confirm or correct the data. Where it

was felt necessary, they were asked to support their data with documentary evidence. Several e-mails were sent, and telephonic calls were made to various institutes for verification of data on different parameters and sub-parameters.

### **6.5.2. Communication with Nodal Officers**

Each institution was asked to nominate one of their senior functionaries as a nodal officer for dealing with NIRF matters. These nodal officers were contacted to clear doubts or to attend to the feedback and anomalies pointed out by the expert committees. Nodal officers were also called in person (where necessary) to interact with members of the committee and verify their data. For increased transparency, an advisory was sent to each institution to upload this data on their own website for dissemination to the public. For all the top-ranked institutions, the latest version of the corrected data based on further inputs from the institutions was made visible on the NIRF portal.

While significant efforts were made to authenticate the data, the final responsibility for the accuracy of the submitted data lies with the concerned institutions.

### **6.5.3. Verification of Data on Publications, Citations and Highly Cited Papers**

The data on publications, citations and highly cited papers were shared with each applicant institution from 9th to 14th March, 2020. Applicants were informed that the data was captured between 25th to 31st January, 2020 for all institutions.

## **6.6 Inclusions and Exclusions**

The NIRF website and NIRF guidelines provides basic qualifiers for an institution to participate in India Rankings 2020 for Overall ranking as well as for domain-specific and category-specific ranking. For example, an institution should have at least 1,000 students enrolled for various courses at undergraduate and post graduate level to participate in Overall ranking. Institutions are also required to have graduated a minimum of three batches and qualify for minimum Faculty Student Ratio (FSR) as mentioned in the NIRF Methodology document for respective category and discipline.

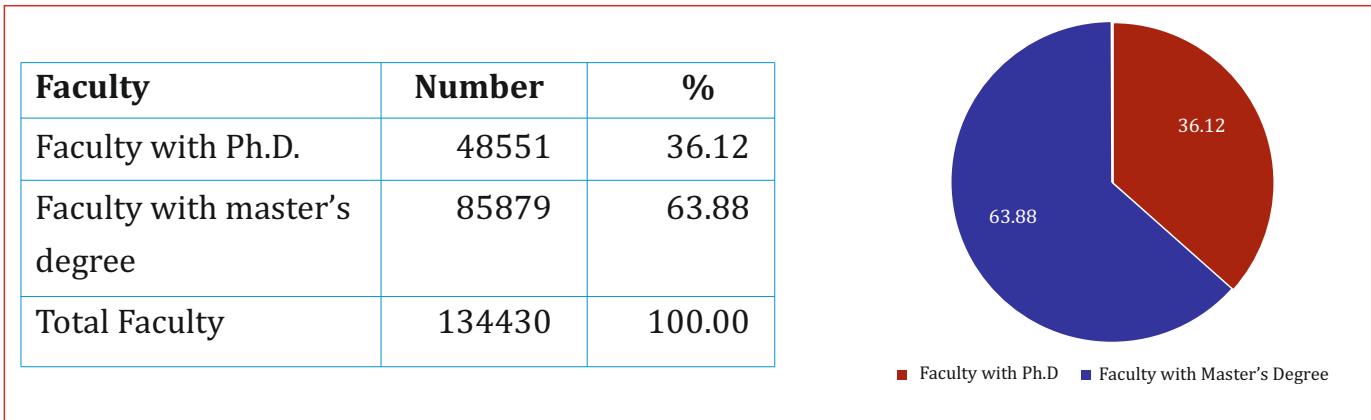

## **7. Visualizing Data Beyond Rankings: Additional Insights**

Data for India Rankings 2020 under category-specific and domain-specific ranking was taken from applicant institutions under five broad generic parameters and 16 - 18 sub-parameters, depending upon a given category or a subject domain. Moreover, data on publications, citations and patents was taken from Scopus (Elsevier Science), Web of Science (Clarivate Analytics) and Derwent Innovation. Besides using this data for ranking of institutions, the combined collection of data for all eligible institutions offers a unique opportunity for analysis and to get interesting and useful insights. Some of the important observations based on a simple data analysis are given below. India Rankings considers data for three years. As such data quoted here refer to three-year period, i.e. 2016 to 2018.

### **7.1 Teaching, Learning and Resources**

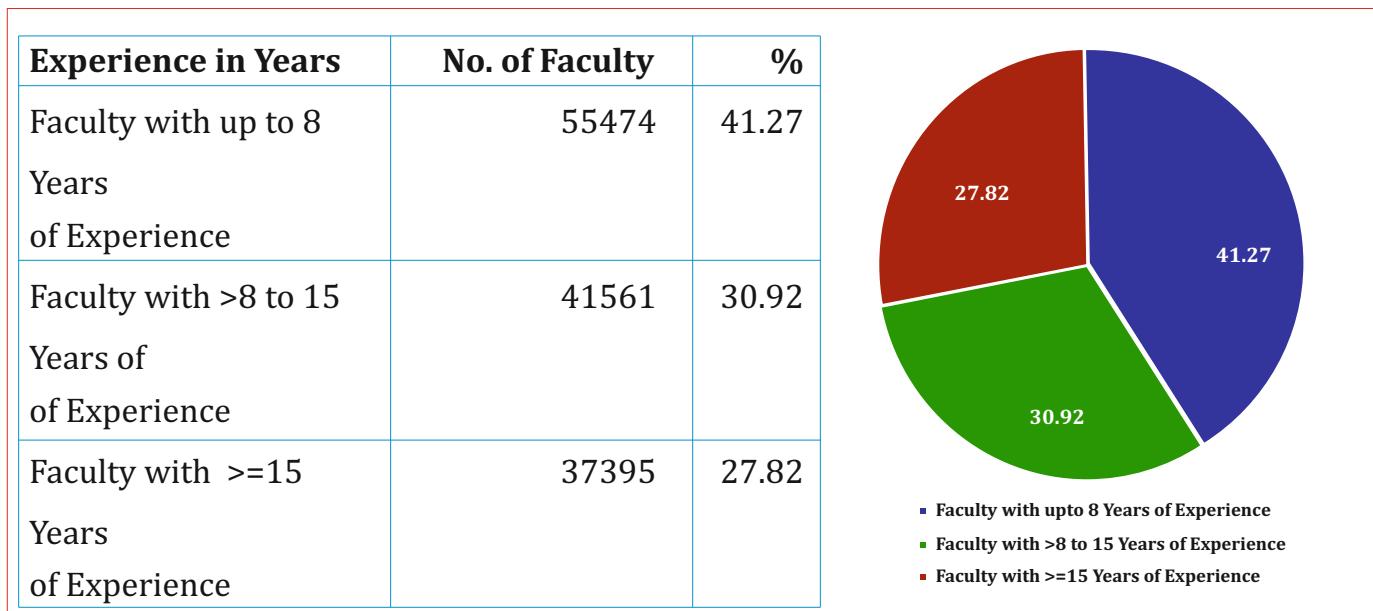

Engineering education has witnessed a phenomenal growth in India in the past two decades with thousands of engineering institution, in private sector and well as in Government sector, coming-up in almost all parts of the country. As such, discipline of engineering is selected for analysis of faculty data to get a bigger picture of higher education institutions in India. The discipline is also undergoing a major challenge in terms of quality and employability of its graduates.

Fig. 3, 4 and 5 below show interesting statistics regarding faculty, their qualifications and teaching experience for all applicants in engineering discipline. Only 36.12% engineering faculty have doctoral qualifications as depicted in Table 4 and Fig. 3. Moreover, faculty with doctoral qualification is concentrated in top 50 / 100 institutions, remaining institutions have very few faculty with doctoral degree. This is a serious handicap since mentorship received during the doctoral training can play a vital role in preparing the faculty for a teaching career in higher education.

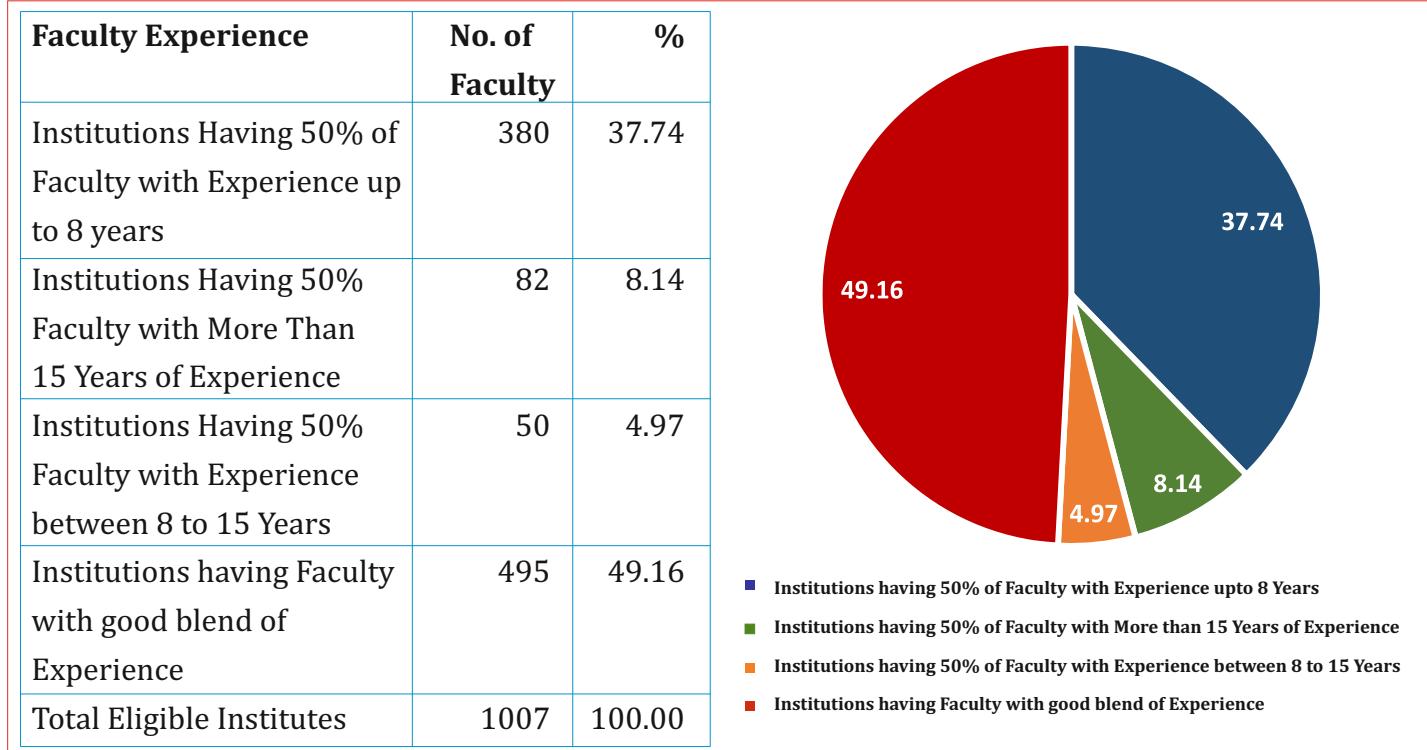

**Table 4 and Fig. 3: Faculty with PhD V/s Faculty with Master's Degree**

Table 5, Table 6 and Figs. 4 & 5 depict teaching experience of faculty in NIRF eligible applicants in engineering discipline. These Figures clearly support the common perception that many institutions are starved of senior and experienced faculty. In other words, the burden of the teaching is largely in the hands of relatively inexperienced faculty, which puts another serious question mark on its impact on the quality of education.

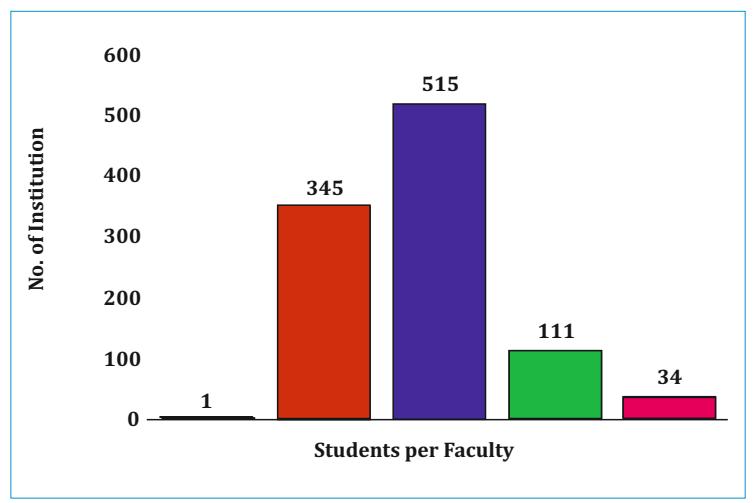

**Table 5 and Fig.4: Experience Profiles of Eligible Institutions**

**Table 6 and Fig.5: Young vs Experienced Faculty**

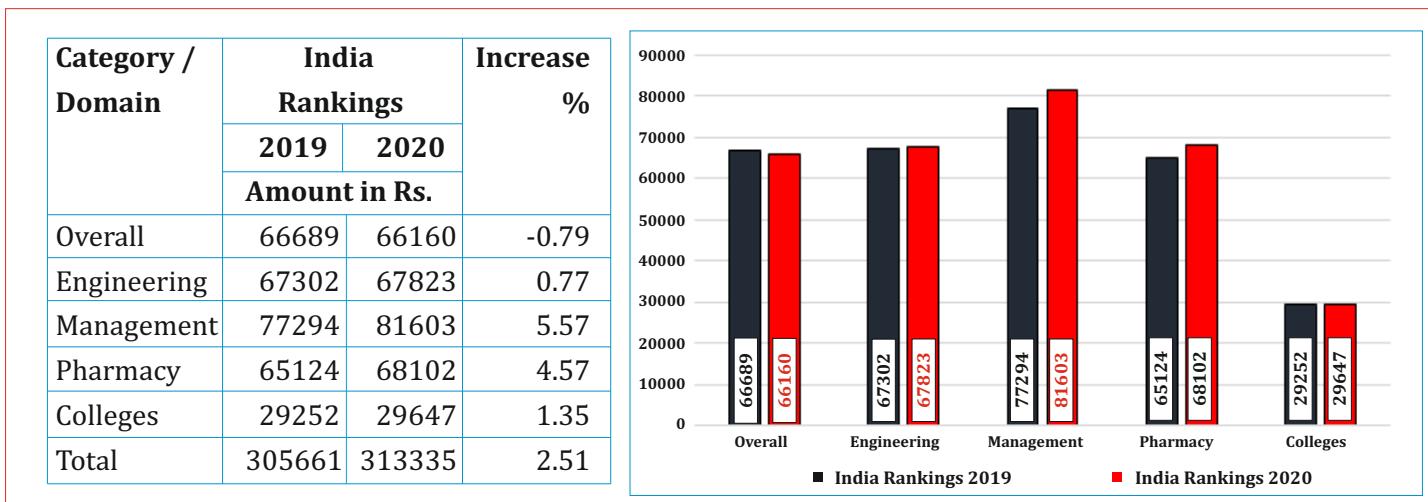

As shown in Table 7 and Fig. 6, 346 institutions (34.36%) qualify the AICTE-prescribed FSR of 20 students per faculty whereas remaining 661 institutions are trying to achieve the acceptable norm.

Faculty Range	No. of Institutions	%
1 - 10	1	0.10
11 - 20	346	34.36
21 - 30	515	51.14
31 - 40	111	11.02
41 - 50	34	3.38
Total	1007	100.00

**Table 7 and Fig.6: Faculty-Student Ratio in Applicant Engineering Institutions**

Table 8 and Fig. 7 provides data on Median Financial Resource Utilization (FRU) per student in various categories and subject domains. The FRU is maximum (Rs. 81603.00) in case of Management that has registered an increase of 5.57% over the last year's FRU of Rs. 77294.00.

**Table 8 and Fig.7: Median Financial Resource Utilization (FRU) per Student in Various Categories and Subject Domains**

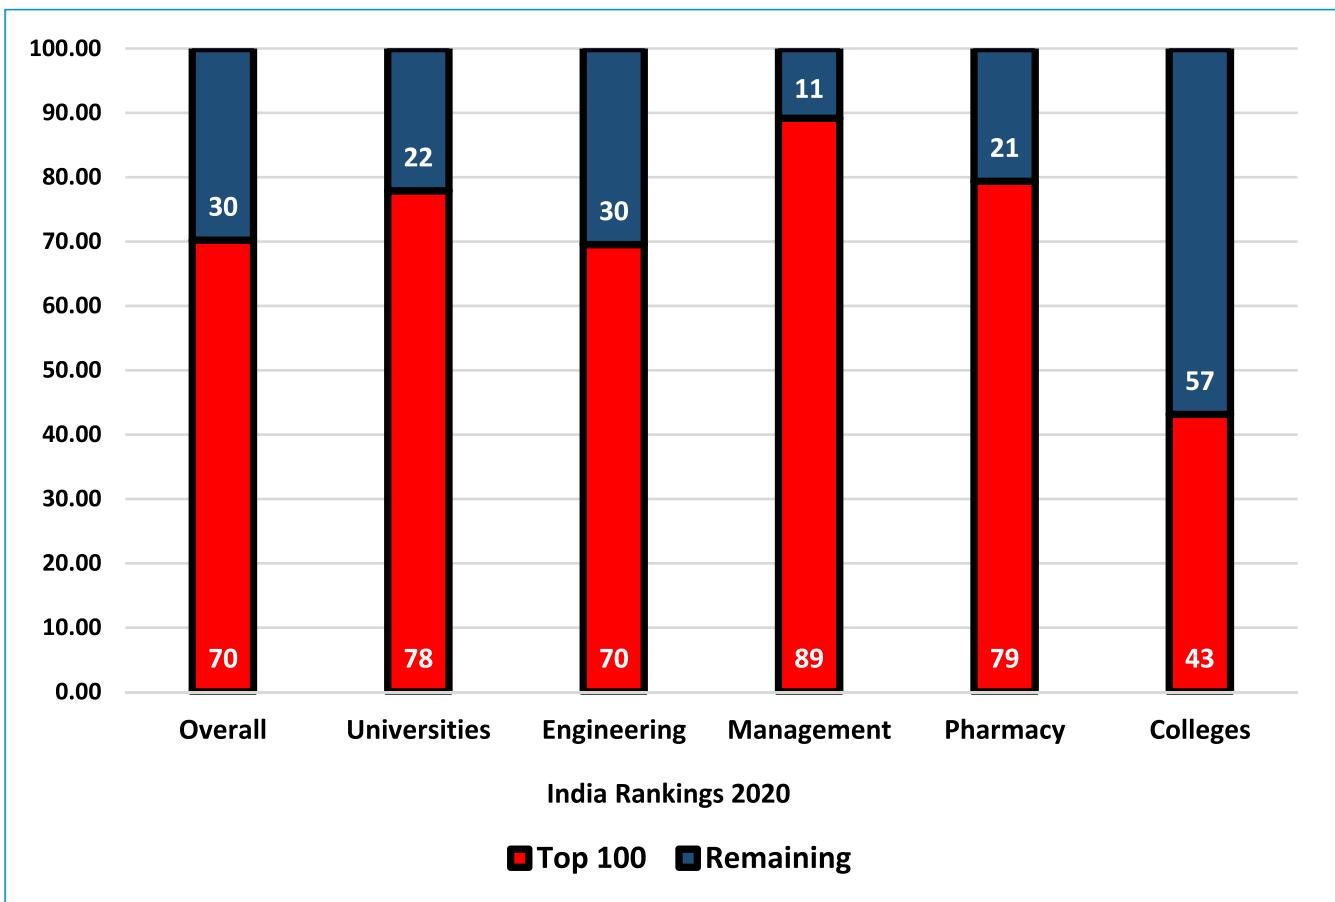

## 7.2 Research and Professional Practice

As mentioned earlier, NIRF has used third party sources to extract information on scholarly output (including research publications, citations and patents) by applicant institutions. For the brief analysis presented here, we have restricted use of data from only one source, i.e., Web of Science, in the interest of simplicity. Data quoted here refer to the three-year period, i.e. 2016 to 2018.

Table 9 and Fig. 8 summarises the total number of publications for various domains and categories of India Rankings 2020. The Table provides a comparison of research publications of top 100 institutions with the rest of the eligible institutions in the same domain / category. It is interesting to note from the first row that 70.21% of the research publications come from the top 100 institutions in “Overall” category with the remaining 855 participating and eligible institutions contributing only 29.79% of research publications. A similar conclusion can be drawn for all other categories except for Colleges. The data seems to follow the famous Pareto’s principle, in the sense that most of the research is being conducted within the top 100 institutions in every category. On the positive side, it appears that a large number of general degree colleges, are active in research and publications activities. However, there is a significant overlap amongst various categories/disciplines since most of the institutions are applicant for ranking in multiple categories / domains.

No. of Eligible Inst.	Discipline / Categories	Total Number of Publications	Publications of Top 100 Institutions	Publications of Remaining Institutions	Top 100 Inst.	Remaining Inst.	Average No. of Publications / Institute
955	Overall	285917	200756	85161	70.21	29.79	299.39
273	Universities	178522	139041	39481	77.88	22.12	653.93
1007	Engineering	152043	105704	46339	69.52	30.48	150.99
579	Management	2645	2358	287	89.15	10.85	4.57
319	Pharmacy	5183	4113	1070	79.36	20.64	16.25
1036	Colleges	13564	5852	7712	43.14	56.86	13.09

**Table 9: Research Publications of Top 100 Institutions as Compared to the Rest of the Eligible Institutions in Various Domains / Categories**

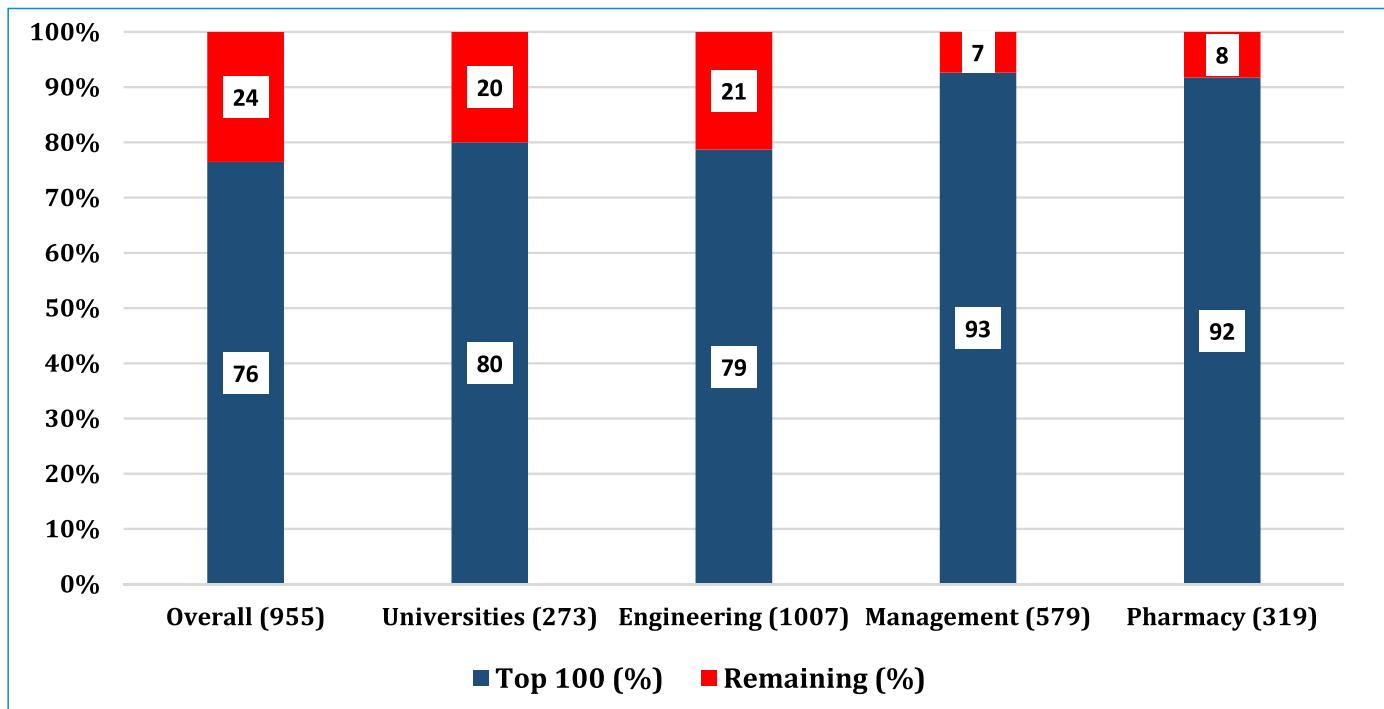

**Fig. 8: Research Publications of Top 100 Institutions as Compared to Rest of the Eligible Institutes in Various Domains / Categories (in %)**

Table 9 and Fig. 8 also convey that the share of research publications in Management, Pharmacy and general degree Colleges is at a much smaller scale in comparison to publications in Overall, Universities and Engineering discipline. In fact, in the Management discipline, the average publications count is 4.57 (Column 8; Row 4) per institution in three years, i.e. a little more than one publication per year. However, since the top 100 institutions in Management category publish 89.15% of publications, the average count for the top 100 is, in fact, fairly good. As a further caution, it may be noted that this data pertains to publications belonging to the Management discipline as categorized by the Web of Science. Clearly, many of the best management schools also publish in allied areas such as Economics, Social Sciences, Information Technology and Psychology – which may not belong to mainstream Management discipline, and therefore, excluded from consideration here.

Table 10 and Fig. 9 summarise total number of highly cited publications (HCP) for various categories and subject domains of India Rankings 2020. The Table 10 and Fig. 9 provide a comparison of HCP of top 100 institutes with the rest of the eligible institutes in the same discipline / category. As in case of publications, 78.72% of the HCP come from the top 100 engineering institutions with remaining 907 participating and eligible engineering institutions contributing only 21.28% of HCP (row 3). Similar observations can be made in case of Overall category. However, in case of Management and Pharmacy, 92.64% and 91.75% HCP is attributable to the first 100 institutions respectively.

No. of Eligible Inst.	Discipline / Categories	Total Number of Highly Cited Publications	Highly Cited Publications of Top 100 Institutions	Highly Cited Publications of Remaining Institutions	Top 100 Institutions	Remaining Institutions (%)
						% of Publications
955	Overall	51367	39272	12095	76.45	23.55
273	Universities	30951	24761	6190	80.00	20.00
1007	Engineering	23369	18396	4973	78.72	21.28
579	Management	693	642	51	92.64	7.36
319	Pharmacy	946	868	78	91.75	8.25

**Table 10: Highly Cited Publications of Top 100 Institutions as Compared to the Rest of the Eligible Institutions in Various Disciplines / Categories**

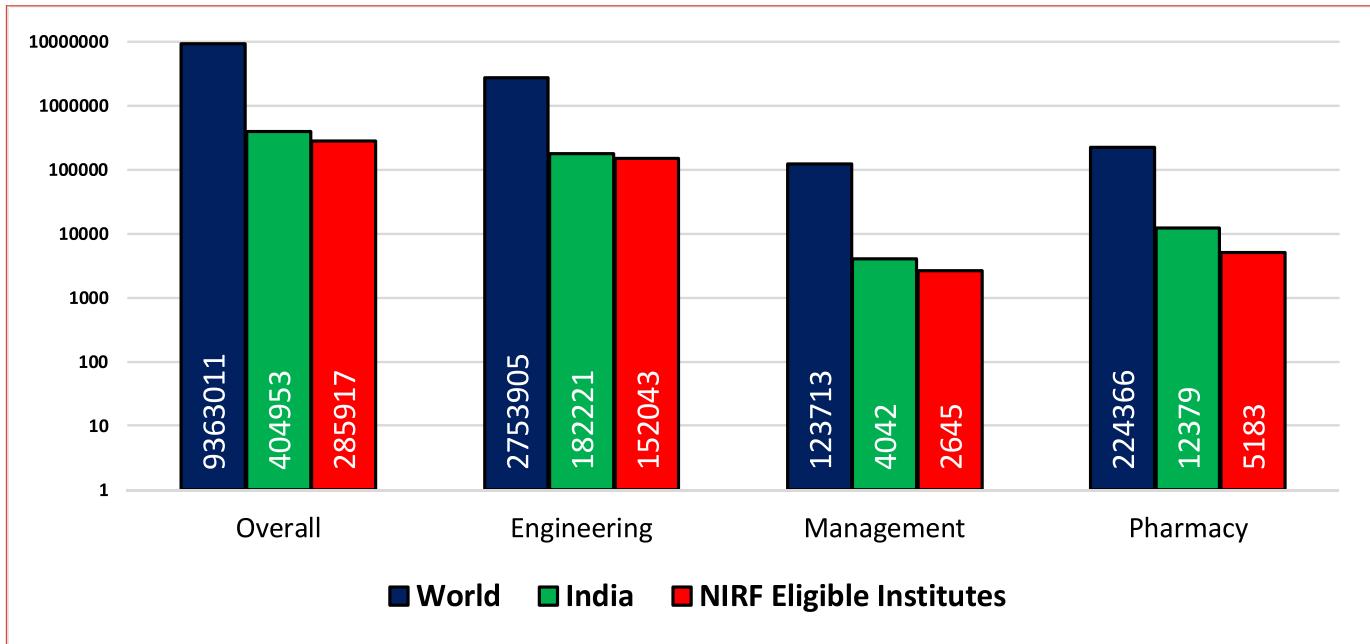

**Fig. 9: Highly Cited Publications of Top 100 Institutions as Compared to the Rest of the Eligible Institutions in Various Disciplines / Categories**

As a useful point of reference, Table 11 and Fig. 10 show the relative numbers of publications from India as compared to that of the World and NIRF participants in the respective categories. The following facts are apparent:

- i) Indian share of the overall world publications is about 4.33%. In the Management discipline, the share falls to about 3.27%.
- ii) 70.60% of the scholarly output from India comes from NIRF eligible applicants in Overall Category. In fact, it can be safely concluded that this would be close to (if not equal to) the total scholarly output from the academic world from India.
- iii) In Engineering discipline, India's contribution to world publications is 6.62% (higher by more than 2% than Overall category), and 83.44% of publications in Engineering discipline comes from NIRF eligible applicants in India Rankings.

Discipline / Category	No. of Research Publications		
	World (1)	India (2)	IR Eligible Institutes
Overall (All)	9363011	404953 (4.33% of (1))	285917 (70.60% of (2))
Engineering	2753905	182221 (6.62% of (1))	152043 (83.44% of (2))
Management	123713	4042 (3.27% of (1))	2645 (65.44% of (2))
Pharmacy	224366	12379 (5.52% of (1))	5183 (41.87% of (2))

**Table 11: Research Publications of NIRF Eligible Applicants in Comparison to Total Research Publications of the World and India**

**Fig. 10: Research Publications of NIRF Eligible Applicants in Comparison to Total Research Publications of the World and India (On a Logarithmic Scale)**

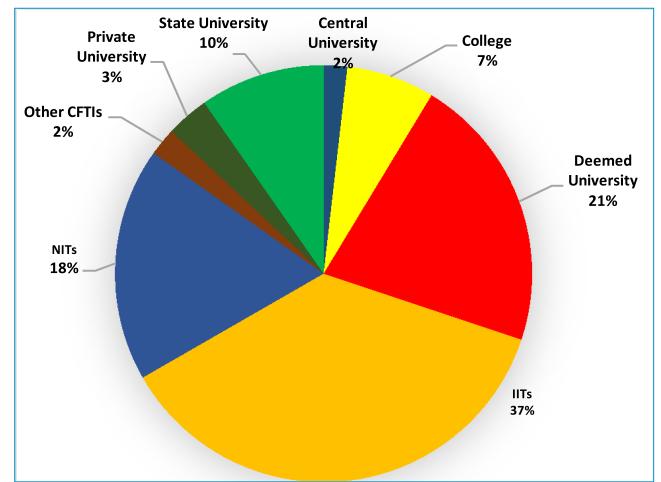

It may also be noted that a significant number of NIRF eligible applicants have no publications at all as revealed in Table 12. It is noteworthy that 368 management institutions (out of 579 eligible applicants institutions) and 329 colleges (out of 1036 eligible applicants) have “0” publication. This is not surprising since many of these see their primary role in undergraduate education (colleges) and to a lesser extent, the focus is on “case studies” rather than on research publications in case of management institutions.

No. of Applicant Inst.	Discipline / Category	No. of Institutions having “0” Publications	%
955	Overall	72	7.54
1007	Engineering	67	6.65
579	Management	368	63.56
319	Pharmacy	49	15.36
1036	Colleges	329	31.76

**Table 12: Number and % of NIRF Eligible Applicants having “0” Publications**

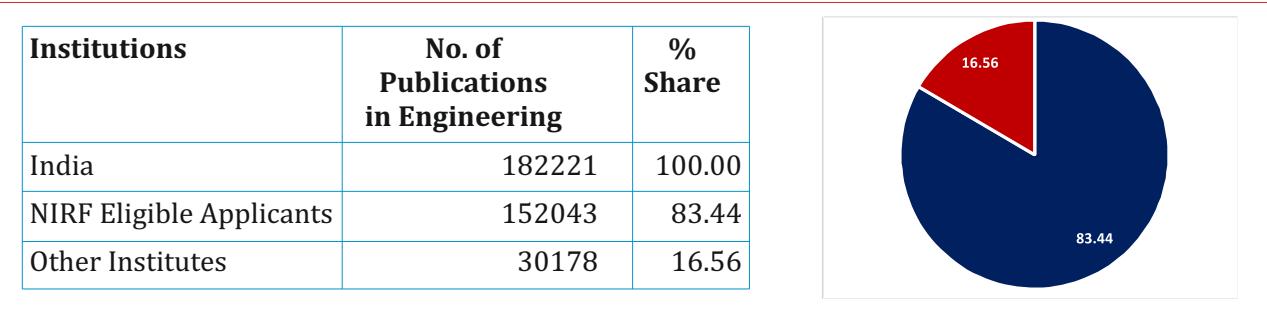

Furthermore, a deeper look at one of the larger disciplines, viz., Engineering shows that percentage share of publications of different types of institutions amongst the top 100 ranked institutions in terms of research articles published in this domain reveals that IITs take the lion’s share with nearly 36.59% of the Engineering publications to their credit followed by 21.46% by deemed-to-be-universities and 18.12% by NITs as shown in Table 13 and Fig. 11. There is, at the same time, a good sprinkling in all categories of participating institutes. This clearly augurs well for the research productivity in the engineering domain.

Institute Category	No. of Publications	%
Central University	1932	1.83
Engineering College	7222	6.83
Deemed University	22680	21.46
IITs	38674	36.59
NITs	19151	18.12
Other CFTIs	2292	2.17
Private University	3499	3.31
State University	10254	9.70
Total	105704	100.00

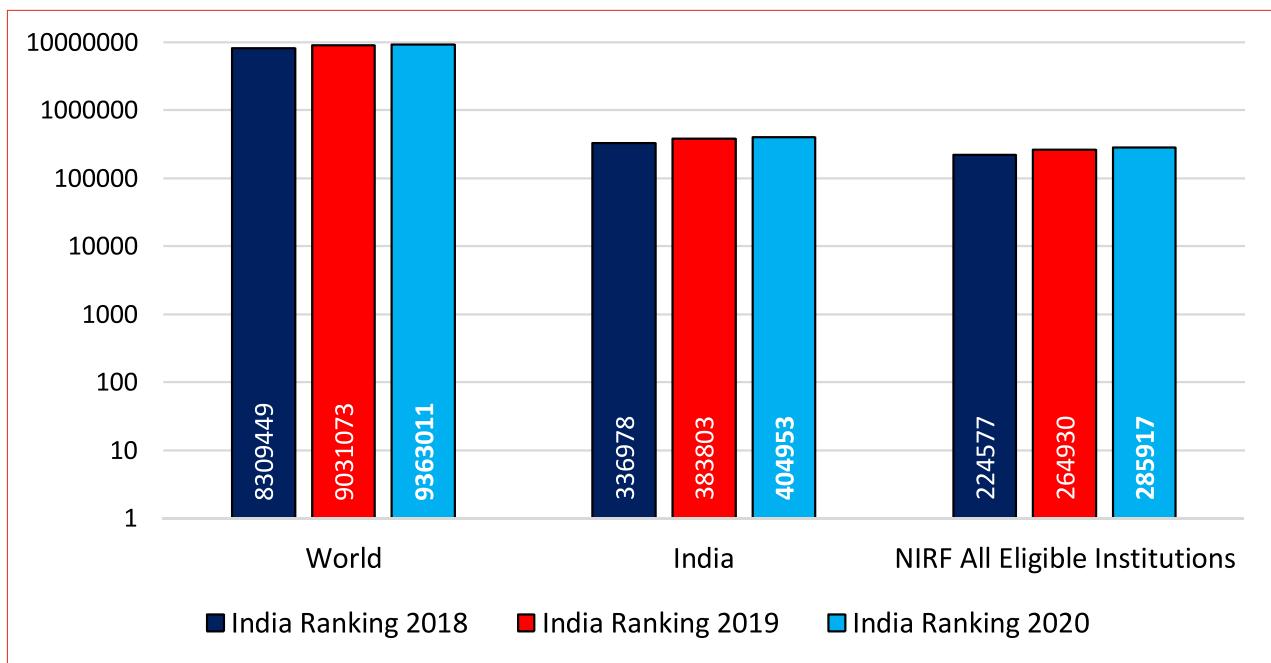

**Table 13 and Fig. 11: Share of Publications from top 100 Highly Productive Engineering Institutions**

Table 14 and Fig. 12 indicate that a major part of the productive engineering institutions are part of the India Rankings 2020 that accounts for 83.44% of total publications. This demonstrates the high-quality participation and aspiration of quality institutions for the NIRF ranks, which is very gratifying. It seems from this Figure, though, that a significant part of research fraternity (16.56%) may be unrepresented. This conclusion, however, is likely to be faulty, since there are a good number of Research Labs, belonging to the CSIR System, the DAE system, ISRO and private research labs who also publish significantly in Engineering, and do not form part of the mainstream academic system in India.

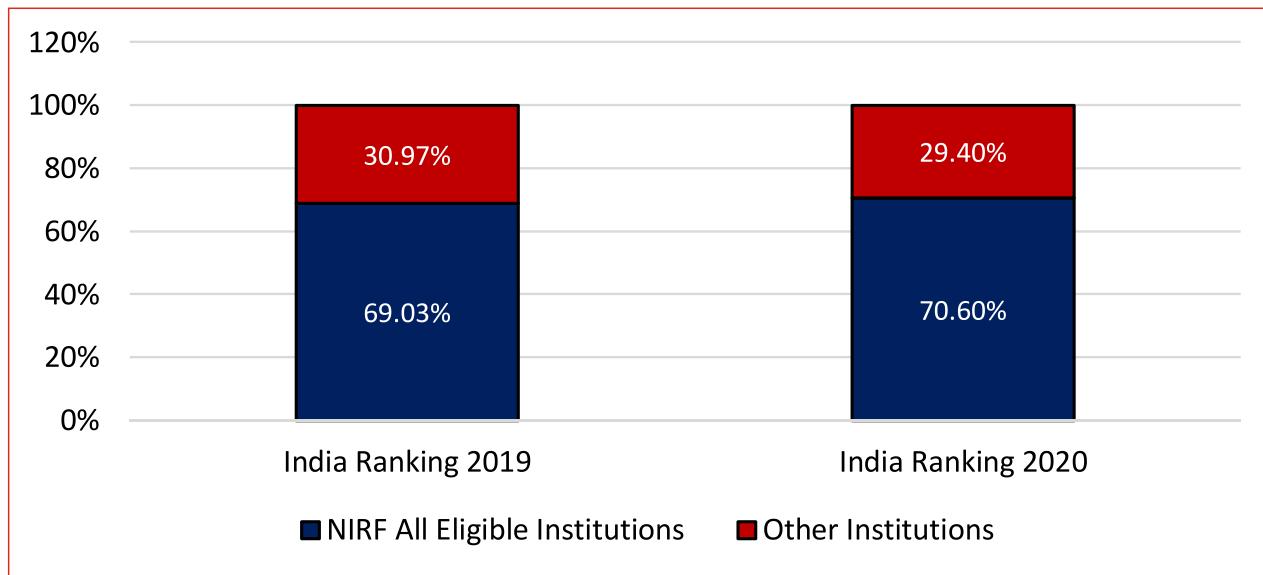

**Table 14 and Fig. 12: % Share in India's Total Publications vs. Publications of NIRF Eligible Applicants in Engineering**

Fig. 13 compares number of research publications in world for the years applicable for India Rankings 2019 and 2020. The total number of publications in the World registered an increase of 8.68% and 3.68% in the years corresponding to India Rankings 2019 and India Rankings 2020 respectively. In comparison, number of research publications of India for the corresponding period registered an increase of 13.90% and 5.51% respectively in Overall category.

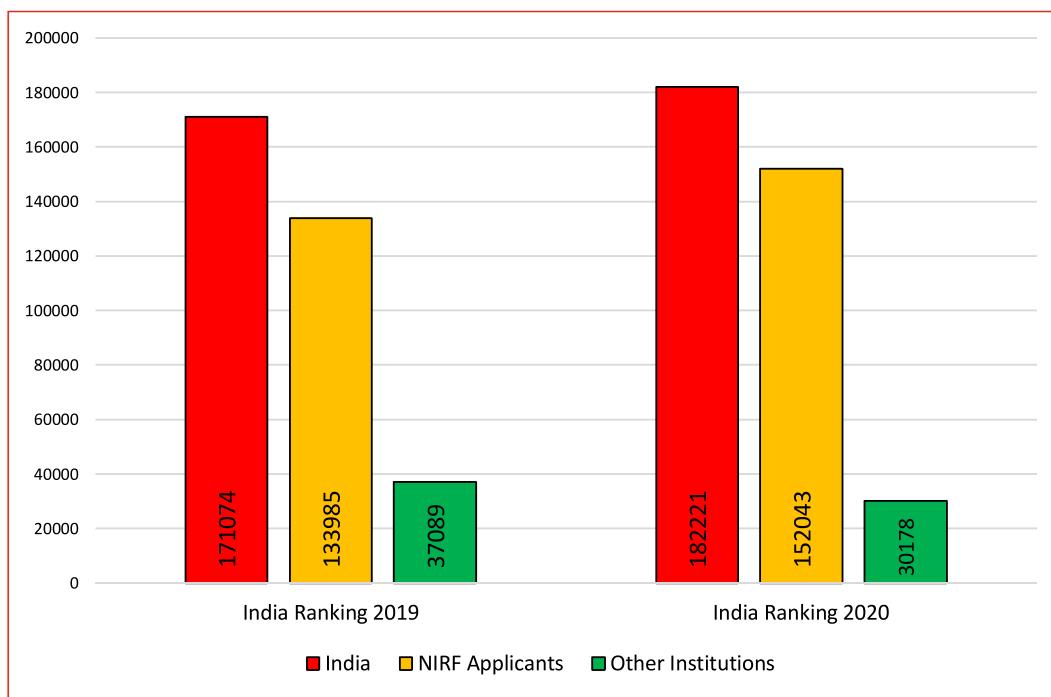

**Fig. 13: Comparative Research Publications of World, India and NIRF Eligible Applicants in Overall Category**

It can also be observed from Fig. 14 that total research publications of NIRF applicants for the years applicable for India Rankings 2019 and 2020 constitute 69.03% and 70.60% of total India's research publications in the Overall Category.

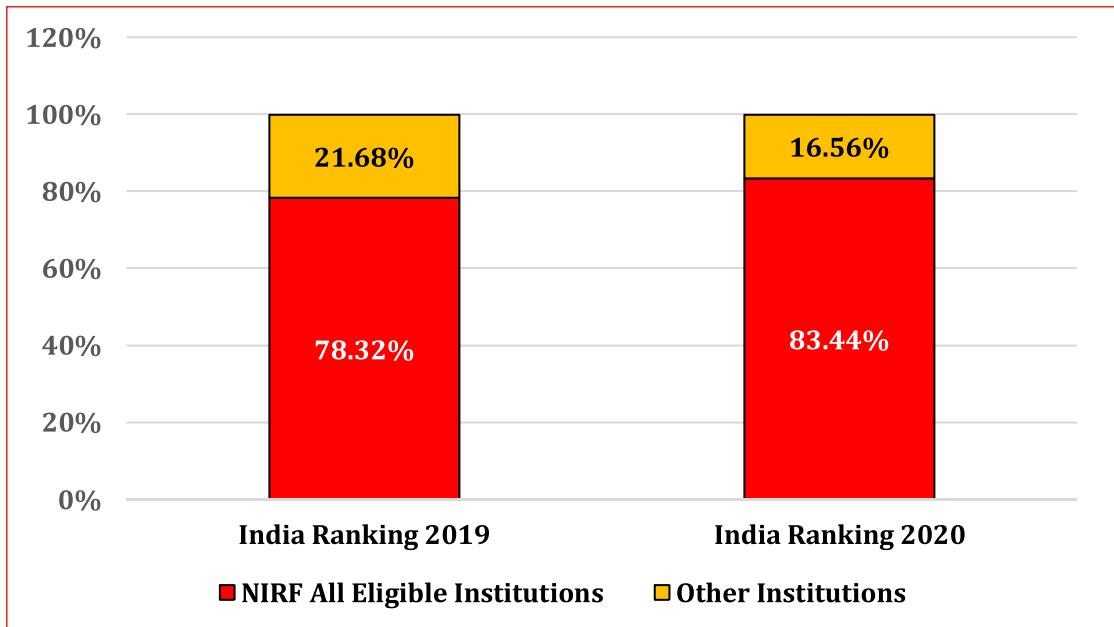

**Fig. 14: Total Publications of India: NIRF Eligible Applicants and Other Institutions**

Fig. 15 presents similar comparison for the Engineering category for the years applicable for India Rankings 2019 and 2020. Number of publications from entire India increased by 6.52% for years corresponding to India Rankings 2020 over publications corresponding to India Rankings 2019. In corresponding period, number of research publications for NIRF eligible applicants increased by 13.48% whereas for other institutions registered a decrease of 18.73%. Decrease in contributions from NIRF non-applicants is an indirect indication of greater participation of NIRF eligible institutions in the ranking exercise. This trend may continue in coming years as new domains / categories are added to the India Rankings. On the other hand, increase in publications from India as well as from NIRF eligible applicants can also be attributed to increased emphasis on publications in quality journals.

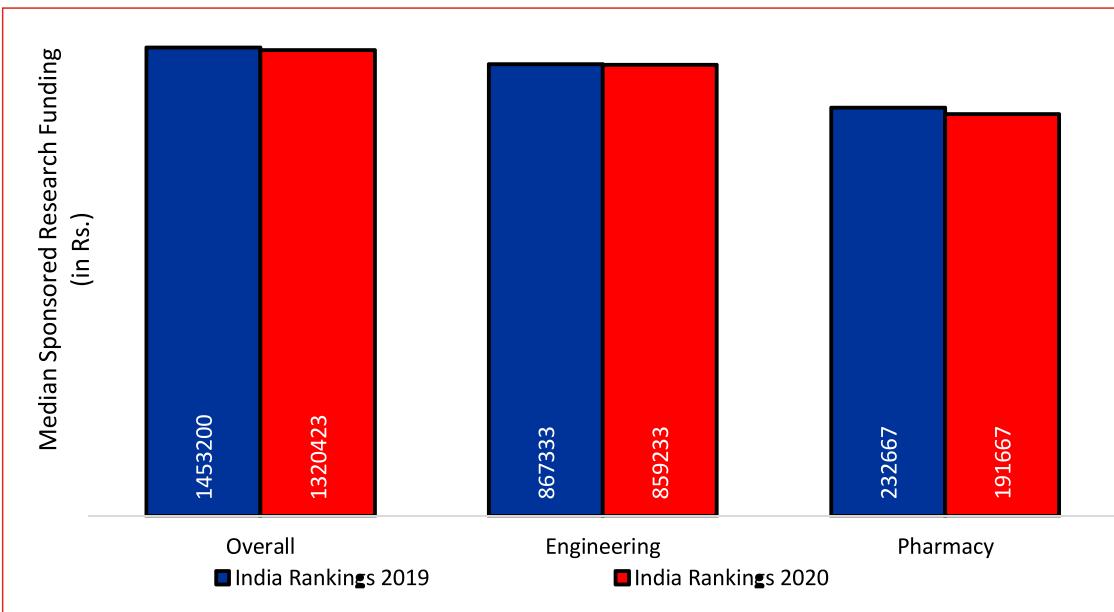

**Fig. 15: Comparative Research Publications of India, NIRF Eligible Applicants and Other Institutions in Engineering for India Rankings 2019 and 2020**

It can also be observed from Fig. 16 that total research publications of NIRF eligible applicants for the years applicable for India Rankings 2019 and India Rankings 2020 constitute 78.32% and 83.44% of total India's research publications in the field of Engineering.

**Fig. 16: Total Publications of India: NIRF Eligible Applicants and Other Institutions in Engineering**

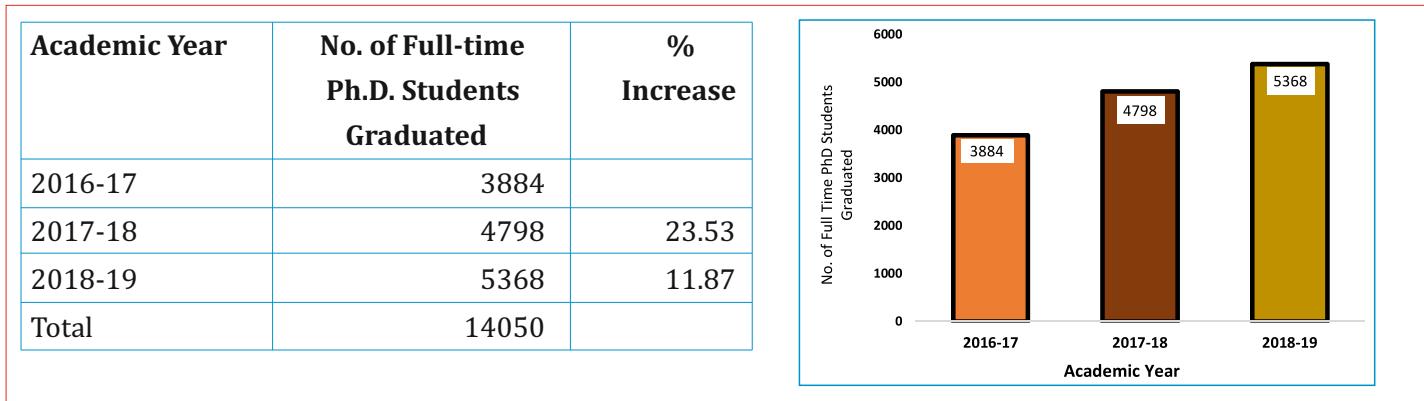

Fig. 17 plots sponsored research funding availed by the NIRF participants in three categories, i.e. Overall, Engineering and Pharmacy. The figure presents median values of sponsored research funding for the years 2019 and 2020 in three categories, namely Overall, Engineering and Pharmacy. Decrease in funding can be observed in all the three categories which indicates limited opportunities for research funding across disciplines in India.

**Fig 17: Comparison of Sponsored Research Funding**

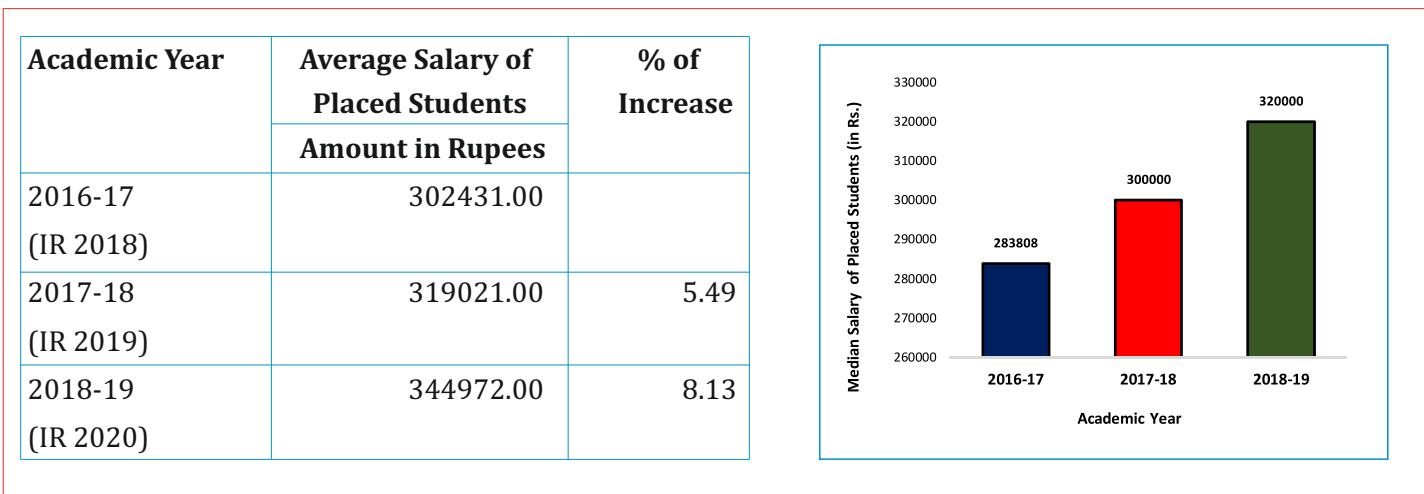

### 7.3. Graduation Outcomes

Table 15 and Fig. 18 provide number of full-time Ph.D. students who graduated from 1007 eligible engineering applicants in the academic year 2018-19. It can be observed that percentage of increase in Ph.D. awarded was 23.53% and 11.87% in the academic years 2017-18 and 2018-19 respectively.

**Table 15 and Fig. 18: Increase in Number of Ph.D. Graduated during Academic Years 2016-17, 2017-2018 and 2018-2019 in Engineering**

Table 16 and Fig. 19 provide average salary of engineering graduates during Financial Years 2016-17, 2017-18 and 2018-19. Increase of 5.49% and 8.13% in median salary can be observed in the Financial Years 2017-18 and 2018-19 respectively.

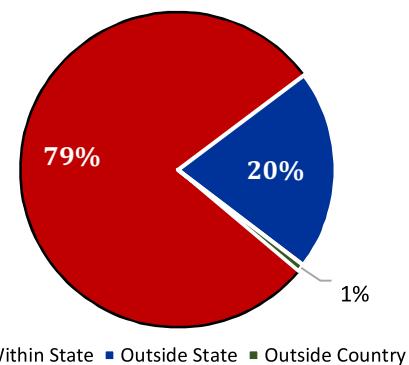

**Table 16 and Fig. 19: Average Salary of Students Placed through Campus Placement in Engineering Institutions in Academic Years 2016-17 to 2018 -19**

### 7.4. Outreach and Inclusivity

Table 17 and Fig. 20 reveal regional diversity in enrolment in eligible engineering institutions. It may be noted that while 78.63% of students were enrolled from within the state, 20.60% of students came from other states and less than 1% students were from outside the country. 17,962 students (0.76%) from outside the country were studying in 312 institutions.

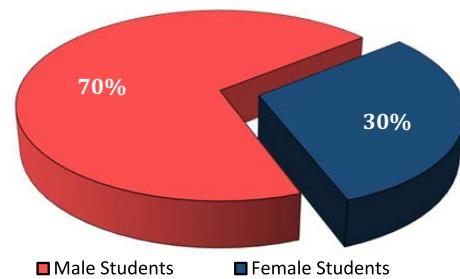

Academic Year	No. of Students (all programs)	%
18-19		
Within State	1854198	78.63
Outside State	485834	20.60
Outside Country	17962	0.76
Total No. of Students	2357994	

**Table 17 and Fig. 20: Regional Diversity: No. and Percentage of Students from Outside State and Country in Engineering (All Programs) during Academic Year 2018 - 19**

Table 18 and Fig. 21 provide data on gender diversity among students enrolled in different programs in engineering discipline during the academic year 2018 - 2019. Of total 23,57,994 students enrolled in different engineering programs, 16,47,751 (69.75%) were male and 7,13,243 (30.25%) were females.

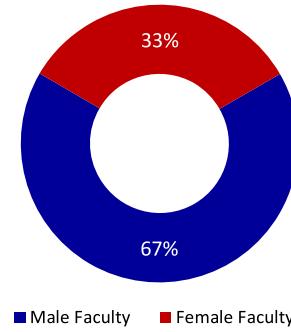

Gender	No. of Students	%
Male	1647751	69.75
Female	713243	30.25
Total	2357994	100.00

**Table 18 and Fig. 21: Gender Diversity amongst Students: Male V/s Female Enrolment in Engineering in Academic Year 2018 – 19**

Table 19 and Fig. 22 plot data on gender diversity among faculty in engineering institutions. Of total 1,34,430 faculty, 89,708 (66.73%) were males and 44,722 (33.27%) were females.

Gender of Faculty	Number of Faculty	%
Male	89,708	66.73
Female	44,722	33.27
Total No. of Faculty	1,34,430	100.00

**Table 19 and Fig. 22: Gender Diversity amongst Faculty: Male V/s Female Faculty in Engineering in Academic Year 2018 – 19**

## 7.5. Perception

Fig. 23 and 24 depict the vote shares of peer and employer's perception for various categories of Institutions. It is interesting to note that maximum vote is picked up by the Overall, Engineering and College categories. On the other extreme, all other remaining subject categories, i.e. Law, Medical and Architecture continued with the trend of weak response from the peers. The subject category of Dental, ranked for the first time drew => 1% interest amongst peers and employers. This might be an indication towards requirement for expansion of database of Peers and Employers in these fields.

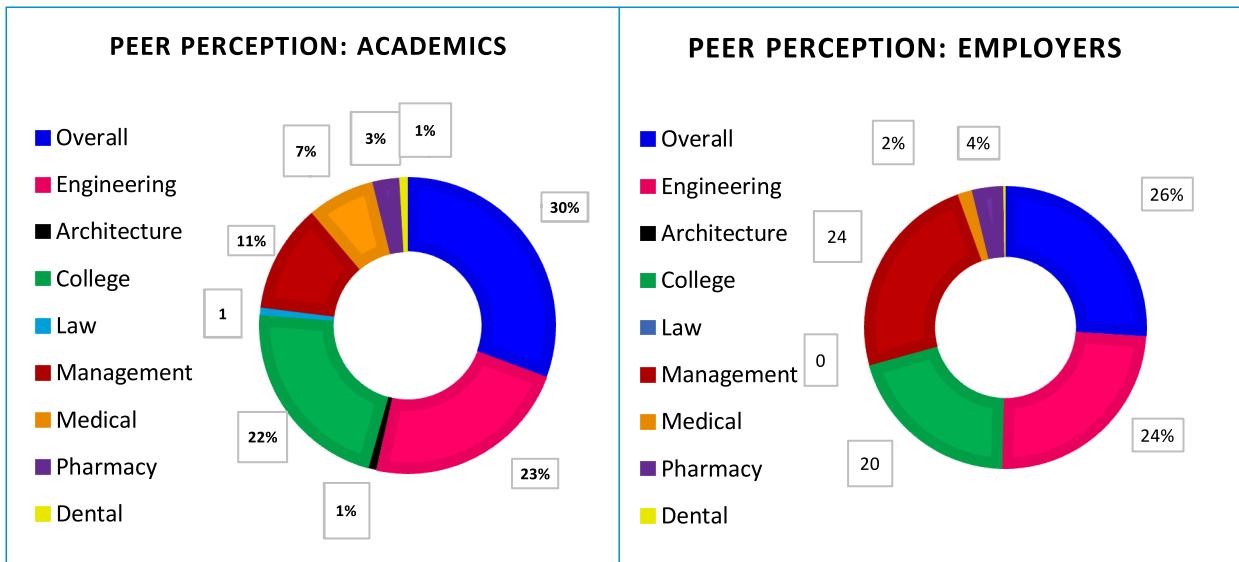

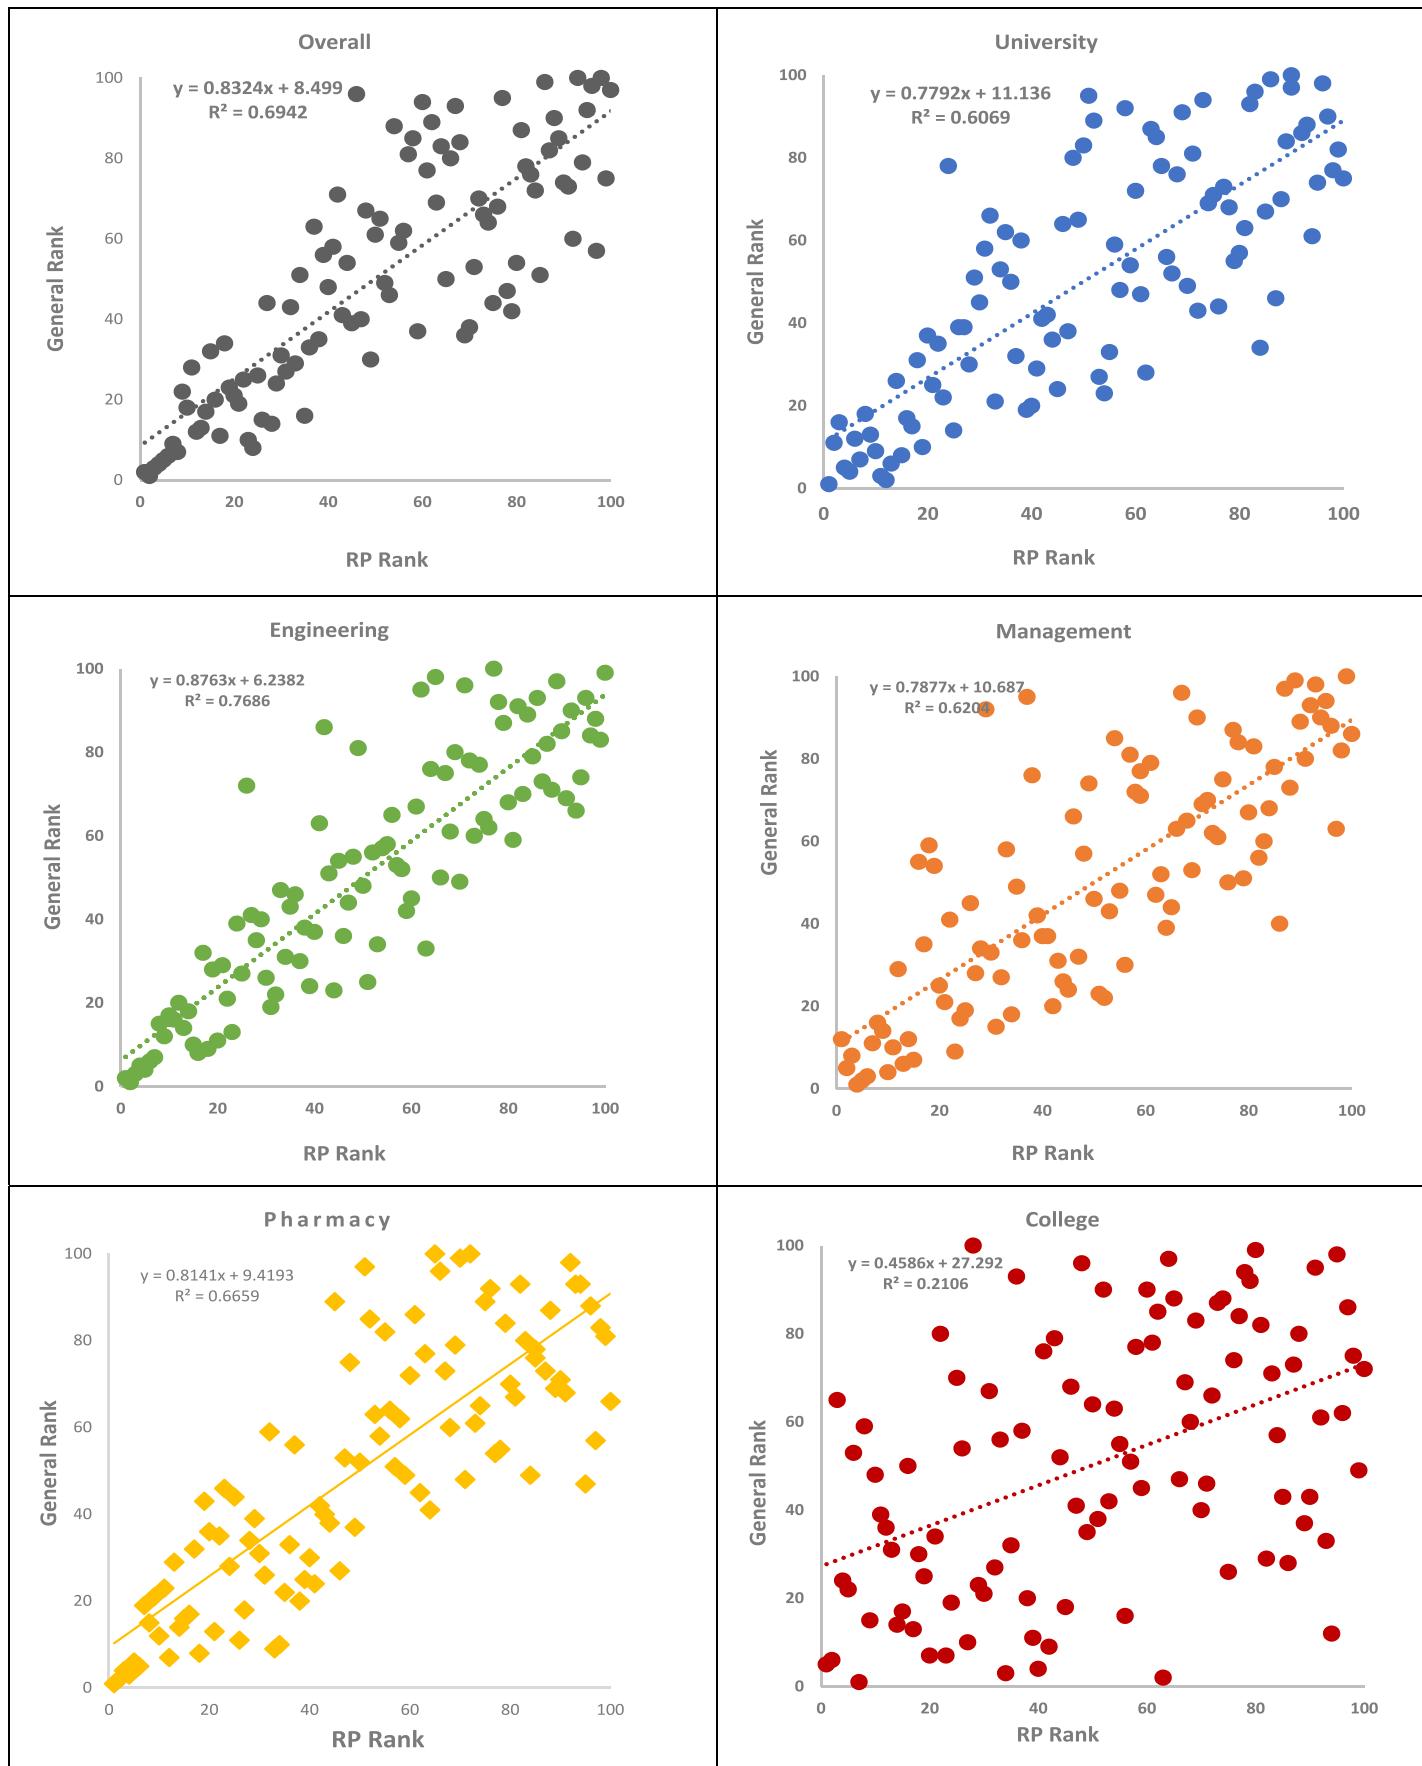

Fig. 23 and Fig. 24: Peer and Employer's Perception

## 7.6. Rank Order Correlations across Parameters

Table 20 given below provides value of Spearman's Rank Order Correlation Coefficient between ranks of institutions based on its total score with that of its rank based on research performance in various categories and subject domains. As mentioned before, data for research performance is taken from third-party independent sources, namely Web of Science. Fig 26 to Fig. 31 depict the mean of the scatter plots of corresponding scores along the two axes for various categories and subject domains. A strong and positive correlation can be noticed for each discipline except for colleges. The strong correlation between ranking by research performance based on data from third-party independent sources and overall ranking vouch for authenticity of data collected from institutions.

Category / Subject Domain	Spearman Rank Correlation Coefficient (r)	Coefficient of Determination (R <sup>2</sup> )
Overall	0.83	0.69
University	0.78	0.61
Engineering	0.88	0.77
Management	0.79	0.62
Pharmacy	0.82	0.67
College	0.46	0.21

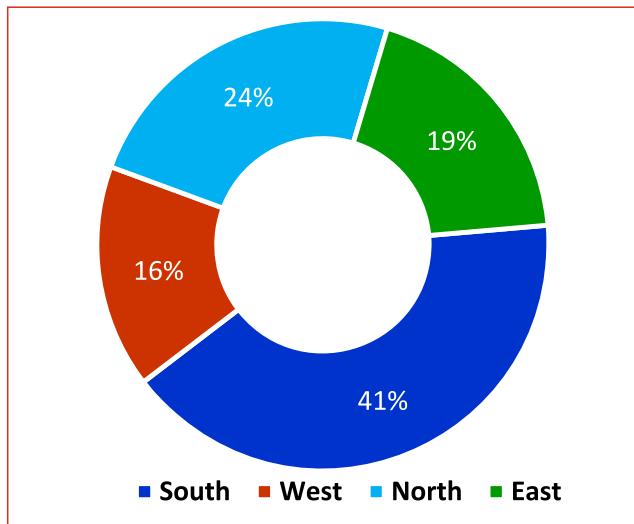

Table 20: Spearman Rank Correlation Coefficient (r) for Various Categories and Subject Domains

**Fig. 25 to Fig. 30: Correlation between Ranks by Research Performance and All Other Parameters for Different Categories and Subject Domains**

## 7.7. Regional Outlook

Fig. 31 depicts that there is a good regional balance of institutions, although this picture can change with redefinition of the regions. The maximum participation comes from Southern part of India that host larger number of institutions of higher education.

**Fig. 31: Region-wise Distribution of Ranked Institutes in Overall Category**

## 8. Computation of Scores and Rankings

Rankings are based on the information and data provided by the institutions. Data on publications and citations have been taken from standard indexing and citation sources, viz., Scopus (Elsevier Science) and Web of Science (Clarivate Analytics). Perception data has been compiled from inputs from employers and peers. NIRF Team has done limited validation of data. NIRF also provided an opportunity to the general public through press advertisement and through web-portal, to give feedback on the quality and accuracy of data submitted by different institutions. Queries and comments received from the public were passed on to the concerned institutions for suitable action. However, responsibility for the accuracy and authenticity of the data lies with the institutions supplying it. Final data are available on the NIRF portal.

Overall weighted scores and ranks of institutions in different subjects / categories as well as their weighted scores on five broad generic parameters are given on the NIRF Website at the URL mentioned below:

Category / Discipline	No. of Ranked Institutions and Rank Band*	URL	
	OVERALL	Rank: Top 100 Rank band: 101-150 & 151-200	<a href="https://www.nirfindia.org/2020/OverallRanking.html">https://www.nirfindia.org/2020/OverallRanking.html</a>
	UNIVERSITIES	Rank: Top 100 Rank band: 101-150 & 151-200	<a href="https://www.nirfindia.org/2020/UniversityRanking.html">https://www.nirfindia.org/2020/UniversityRanking.html</a>
	ENGINEERING	Rank: Top 200 Rank band: 200-250 & 251-300	<a href="https://www.nirfindia.org/2020/EngineeringRanking.html">https://www.nirfindia.org/2020/EngineeringRanking.html</a>
	MANAGEMENT	Rank: Top 75 Rank band: 76-100	<a href="https://www.nirfindia.org/2020/ManagementRanking.html">https://www.nirfindia.org/2020/ManagementRanking.html</a>
	PHARMACY	Rank: Top 75 Rank band: 76-100	<a href="https://www.nirfindia.org/2020/PharmacyRanking.html">https://www.nirfindia.org/2020/PharmacyRanking.html</a>
	COLLEGES	Rank: Top 100 Rank band: 101-150 & 151-200	<a href="https://www.nirfindia.org/2020/CollegeRanking.html">https://www.nirfindia.org/2020/CollegeRanking.html</a>
	MEDICAL	Rank: Top 40	<a href="https://www.nirfindia.org/2020/MedicalRanking.html">https://www.nirfindia.org/2020/MedicalRanking.html</a>
	LAW	Rank: Top 20	<a href="https://www.nirfindia.org/2020/LawRanking.html">https://www.nirfindia.org/2020/LawRanking.html</a>
	ARCHITECTURE	Rank: Top 20	<a href="https://www.nirfindia.org/2020/ArchitectureRanking.html">https://www.nirfindia.org/2020/ArchitectureRanking.html</a>
	DENTAL	Rank: Top 30	<a href="https://www.nirfindia.org/2020/DentalRanking.html">https://www.nirfindia.org/2020/DentalRanking.html</a>

\* Institutions in rank bands are listed in alphabetical order:

# **Top Ranked Institutions in Various Categories**

## 9.1 India Rankings 2020: Top 100 in Overall

Name	State	Rank
Indian Institute of Technology Madras	Tamil Nadu	1
